Specialized Printers

PR4-DR

High performance

The Olivetti PR 4 DR printer, prints on individual forms inserted from the front or the top of the machine and on two rolls.

The capabilities of the PR 4 DR make it the highest performing printer in its product class. The PR 4 DR also reads CMC7 and E13B code lines for rapid cheque processing and can be fitted with a multi-function board for direct management of two drawers and a customer display. All these capabilities are housed in a compact, functional box designed to maximise user-friendliness.

Automatic management of supplies

With the PR 4 DR, cashdesk operations, including replacement of supplies – paper rolls, ribbon cartridge – are quick and easy.

This is because the PR 4 DR ensures safety and autonomy at all times. Designed to enable the cashier to work with the greatest of ease, it offers a range of unique features: the PR 4 DR is the only retail printer with automatic slip alignment, and the only printer that loads new paper rolls (for the journal and receipts) automatically.

This exclusive function is particularly important, because it guarantees trouble-free operation for the cashier, something that will also be appreciated by the customer waiting at the cashdesk.

With its high-precision performance, the PR 4 DR can be used with a full range of forms, including pre-printed stationery.

A broad range of applications

Automation is a key requirement in any retail environment: large department stores with a large number of cashdesks, super and hypermarkets with payout barriers, small shops where the cashdesk has been turned from a "receipt provider" into a small management system. Plus fuel stations where minimarkets are an increasingly common sight, hotels and restaurants, ticket offices, bank branches. In all these environments, the PR 4 DR can handle any type of transaction: receipts, sales forms, coupons, tickets, credit-card forms, cheques, invoices, withdrawal and deposit slips, currency exchange receipts. And if required, it will record the details of each transaction in a daily journal (complete with key).
